

Things not implemented/completed

- The MED.AI website we made is completely responsive except Static pages are not responsive. This was because, the time taken to learn web development was more than expected. The tools and technologies we used were completely new to us and hence took us more time to learn.
- Another feature we planned on implementing was on adding an account for 'secretary' to our website. After creating an account in this domain, you will be able to schedule appointments for the doctor, hence making the work flow smooth and easier. As this was a secondary requirement realised that we need to prioritize more on our primary requirements.
- We also had thought on adding an account for the pharmaceuticals to help them access the data on number of medicines prescribed in the past month/year to help them increase their sales. We kept this thing for future iteration.
- The Lung cancer ML model is also not implemented as our model is overfitting on the training data set. Hence, in future iterations we will try to use regularization techniques (l1 or l2 penalty) to reduce overfitting.
- The view profile is left to be implemented due to the lack of time as we want to make the functional requirement more effective and well implemented.
